

STAINLESS STEEL WORKPLACE

Stainless steel workplace in the VÍTKOVICE ENERGETICKÉ STROJÍRENSTVÍ a.s. maintains maximum cleanliness and care in all production, transport and handling stages:

1. Stainless steel material is processed at the workplace with increased attention according to internal guidelines.
2. The storage of stainless steel material before the start, even during the work in progress, is only in the designated places and, if it does not have a special packaging, it is covered with a tarpaulin.
3. During production, tools and gauges are used only for stainless steel material. These are color-coded.
4. Stainless steel material is stored separately from conventional carbon steel materials.
5. The cleanliness of warehouses, including pallets, packaging and aids, is constantly maintained and regularly inspected.
